Example: If an isosceles triangle has lengths of two equal sides as 5cm and base as 4 cm and an altitude is drawn from the apex to the base of the triangle. Then find its area and perimeter. Solution: Given the two equal sides are of 5cm and base is 4cm. We know, the area of Isosceles triangle = ½ x base x altitude

##### Properties of Isosceles Triangle - Definition & Solved ...

4. x = 68 Add 8 to each side. x = 17 Divide each side by 4. The triangle is equilateral, so all the sides are congruent, and the lengths of all of the sides are equal. DF = FE. Definition of equilateral triangle. 6. y + 3 = 8. y - 5 Substitution. 3 = 2. y - 5 Subtract 6. y. from each side. 8 = 2. y. Add 5 to each side.

Triangles are classified according to the length of their sides or the measure of their angles. These classifications come in threes, just like the sides and angles themselves. The following are triangle classifications based on sides: Scalene triangle: A triangle with no congruent sides Isosceles triangle: A triangle with at least two congruent sides Equilateral [...]
