Computer-aided diagnosis (CAD) is an approach that has potential to ameliorate subjectivity of traditional histopathology image analysis. Histological CAD is not currently used for diagnosis, but a first step to its acceptance has been taken, as the USFDA has now allowed marketing of a whole slide imaging (WSI)

## **Computer-Aided Diagnosis in Medical**

Computer aided diagnosis. Computer aided diagnosis (CAD) is the use of a computer generated output as an assisting tool for a clinician to make a diagnosis. It is different from automated computer diagnosis, in which the end diagnosis is based on a computer algorithm only.

It can be difficult for clinicians to accurately discriminate among histological classifications of breast lesions on ultrasonographic images. The purpose of this study was to develop a computer-aided diagnosis (CADx) scheme for determining histological classifications of breast lesions using a convolutional neural
