The process of developing a data flow diagram is now completed from the top down, first drawing a companion physical data flow diagram to accompany the logical data flow diagram, then partitioning the data flow diagram by grouping or separating the processes. The World's Trend example is used again in Chapters 8 and 9.

are a preliminary step used to create an overview of the system which can later be elaborated. DFDs can also be used for the visualization of data processing (structured design). A DFD shows what kinds of information will be input to and output from the system, where the data will come from and go to, and where the data will be stored. It does ...
