Semantics is defined as the study of meaning expressed by elements of a language or combinations thereof. Utterances are not just noises or scribbles, they are used to convey information, and they are linked with kinds of events and with states of mind.

In natural language semantics special logical systems have

been developed to give a more adequate logical account of indefinites in donkey sentences and related constructions (see Dekker, 2012). Apart from these structural differences in the formulation of quantified statements, there are also differences in expressive power.

conveyed by a text. Semantic analysis is one of the difficult aspects of Natural Language Processing that has not been fully resolved yet. It involves applying computer algorithms to understand the meaning and interpretation of words and how sentences are structured.
