Lung Cancer—Patient Version - National Cancer Institute

Lung cancer, also known as lung carcinoma, is a malignant lung tumor characterized by uncontrolled cell growth in tissues of the lung. This growth can spread beyond the lung by the process of metastasis into nearby tissue or other parts of the body. Most cancers that start in the lung, known as primary lung cancers, are carcinomas. The two main types are small-cell lung carcinoma (SCLC) and ...

Lung cancer - Wikipedia

Lung cancer: Symptoms, treatment, and early diagnosis

Lung cancer originates in the tissues of the lungs or the cells lining the airways, the bronchi. The disease begins with mutations of normal cells that turn them into cancer cells. These cells divide and multiply at an out of control rate and can eventually form tumors that impede breathing and oxygenation throughout the body.
