One experience I had with a Cat engine with low oil pressure after a rebuild. We changed the pump, regulator etc, etc trying to track down a low oil pressure issue. Finally we dropped the pan and pulled a bearing cap off. Standard bearings had been installed and the engine crank had been machined and needed oversized bearings.

Initially though it was a HP oil issue and replaced the ICP and IPR. Still have a crank no start, no codes pulled and on the live data while cranking the highest oil pressure reading was 1700psi and supply fuel was 73 psi. the engine will jump once like it wants to start when the oil pressure is at it highest but goes back to just cranking.
